

Space tourism is the next
big thing

Extraterrestrials exist

We spend too much on
space agencies

Space should be
privatised

We should be able to
exploit other planets

The Americans didn't
really land on the moon

Space rockets have a bad
environmental impact

We should prepare ourselves
for the end of the world

We should send robots into
space instead of humans

Space exploration has been
beneficial to human life

Space exploration conflicts
with religious beliefs

Only billionaires can
access space
