Computers make our lives easier, but people rely on them too much.

Cloud storage is safer than storing files on your personal computer.

Everyone should learn basic coding in school.

Using public Wi-Fi is too risky and should be avoided.

Computers have made face-to-face communication less important.

Automatic updates often cause more problems than they solve.

Social media platforms should be responsible for preventing hacking and phishing.

Computer games improve problem-solving skills more than they harm productivity.

Working with multiple monitors and digital tools increases efficiency in all jobs.

Using incognito mode and clearing your cache is essential for online privacy.
